

Impressive "Twin" Tower installed in Juan de Herrera Park in San Lorenzo de El Escorial, forming part of the comprehensive renewal of the children's leisure space in a project for the adaptation and improvement of parks.

This large structure, with approximate dimensions of 8x10x6 meters, consists of a main tower accessed through four levels with educational panels, three in a row, bubble windows, and climbing panels. From this main tower, a spiral tube slide extends at a height of 4.5 meters. This main structure connects with three other towers through tubes, walkways, and rope bridges that will delight children aged 3 to 12, for whom its use is intended.

In addition to this new spectacular structure, the actions taken have resulted in a considerable improvement in safety and aesthetics throughout the park, removing obsolete elements and leveling the terrain while applying rubber flooring in colors.
