

BENITO on ice. Lighting project of a sports field in Finland.

BENITO has installed 26 Milan XXL 460 W floodlights and 4 Milan XL 250 W floodlights in the town of Imatra, Finland. This is a project to illuminate the Imatrankoski sports field located next to the Koski school. Students, as well as other citizens, frequent this field which in winter is a frozen rink for ice skating and in summer, with artificial grass installed, is used for running or playing basketball.

This sports field was inaugurated in October 2021 and the final renovation was completed in the summer of 2022. The lighting consists of different optics and versatile accessories that guarantee operation taking into account environmental factors and the use made of the track at each moment.
