

# Tropical wood mahogany finish

Tropical wood from tropical forests (Africa, Asia and America) well-known for its **unrivalled structural features**: high hardness and resistance to decomposing agents and moisture. Comes from very big trees with homogeneous trunks, which allows to obtain boards of big dimensions. Its physical and mechanical features make it appropriate for outdoor use. Doesn't require a vacuum treatment, surface treatments such as Lignus are enough.

Tropical wood offers the following advantages:

- High oil content, thus ensuring a high protection for outdoor use
- High density, which makes it highly resistant to abrasion
- High physico-mechanical features
- Highly appreciated natural aesthetic
